

DLS is currently using Saba 3.4, which is SCORM 1.2 compliant. Saba is running a UNIX platform, and case sensitivity is very important. Developers must ensure we receive a complete and correct ZIP/PIF file for all content that will be loaded on the ALMS. For problems found with content (e.g. case sensitivity issues, SCORM, and content not packaged correctly), it will be the developer's responsibility to correct and return to DLS. DLS does not have an FTP site that you can load content to. However, we are able to receive content from your FTP site. If you plan on getting a report from test item analysis or running other reports, it's very important that your code and SCORM setting are correct or you will not be able to obtain the correct reports. If there are known issues with your content please provide that information when you submit your content for testing. Developers should ensure that the learners are informed of the system requirements as well as plug-ins for the courses they will be taking. Instructions for getting credit and completing the course should also be provided. Information on Saba 5.2 will be provided at a later date.

Below is the information that will be required for content that will be loaded to the ALMS.

- Courseware/software must be received in a PIF/WINZIP file
- Course/Product Name:
- ATRRS Course? Y/N (SC)
- ATRRS Switch Over Date
- Course Start Date
- Course End Date
- Medium - (e.g. how presented)
- Format - (SCORM, etc.)
- Storage location/URL
- Have Source code? Y/N
- Proponent POC
- If content is HTML, and will be loaded to the CVS/LMS, the starting file must be specified
- The version/date of courseware/software
- The Proponent
- The book marking requirements
- The answer key
- Number of modules
- Number of lessons
- Authoring Tool
- System requirement for playing course on the ALMS (e.g. plug-ins, and internet option settings)
